## NDV titers according to age and vaccination program

*By Dr. Louise Dufour-Zavala*

GA Titers are a compilation of baselines from serology testing for Georgia Poultry. For Newcastle disease in breeders, it is important to separate the flocks with different vaccination programs, as killed vaccines give a very different baseline than live vaccines do. The following data is for commercial GA broiler breeder flocks over a period of 2 years (2016 and 2017). Flocks were separated by vaccination program:

- LIVE: 3-4 live vaccine in pullets (B1, Lasota)
- LIVE LIVE: same as above + live vaccination every 8 weeks during production (B1)
- LIVE KILLED: 3-4 live vaccines in pullets followed by an inactivated vaccine injection containing NDV

Flashback to when our very own Jessi Kimbrell performed at the 2018 NPIP Biennial Conference.

## TOURS & VISITORS

- JULY 23-AUG 3RD:  
DR. AMANDA  
NORMAN EXECUTIVE  
DIRECTOR OF THE  
LOUISIANA OFFICIAL  
STATE AGENCY
- JULY 30-31ST:  
USAPEEC AND IRAQI  
DELEGATION

**MARK YOUR CALENDARS!**  
**THE ANNUAL MEETING WILL BE**  
**WEDNESDAY, OCTOBER 3RD.**

USAPEEC and delegates from Iraq visited the lab July 30-31st.

## COMMENTS, TOPIC SUGGESTIONS?

The Chick Papers is a way for the GPLN to share helpful information with you as well as show you what has been happening at the lab. What would you like to see featured in upcoming issues? Please email Bethany Coggin at [bcoggin@gapoultrylab.org](mailto:bcoggin@gapoultrylab.org) with your comments and suggestions.
