

THE CHICK PAPERS

Georgia Poultry Laboratory Network's Monthly Newsletter

New Feature on the Portal

A helpful new feature was recently released on our portal! We think you'll find it useful when looking at your GMTs and CVs for your flocks. It is listed as Serology Report under the General Reports section.

You can filter by dates, grower, purpose, and test type. Each column title can be selected to sort in ascending or descending order depending on your need. Quickly view your titers, or export them to excel to run further analysis. Curious about how close your titers are after vaccination on a flock? Easy! Select that grower, and look at your most recent submissions. Interested in the overall trends for your flocks after a change was made to your program? Another easy one! Select your date range and run with it.

The Serology Report was prompted by a customer request for more tools for analyzing data. Do you have a need or request that would help you and your team manage your flock health programs? Let us know! We are happy to investigate possible solutions, and sometimes what is a benefit to you will help others as well.

Dr. Cervantes with Phibro Animal Health along with his veterinary student intern, Kaitlyn Cook, pose for a commemorative post-tour picture in front of the lab.

Andrew Clyde, the Republican Nominee for the 9th Congressional District, Commissioner Gary Black, and industry representatives toured the lab and our new Emergency Response Building.
